

Transforming Care with Data-Driven Insights

Challenges in care

Care providers today face significant hurdles in delivering effective, high-quality care. A lack of current, actionable data limits the ability to make timely, client centered decisions, directly impacting the quality of care. Compounding this issue are cumbersome regulatory requirements that add administrative strain. Daily management suffers from inadequate information, leaving caretakers unable to make well-informed decisions quickly. Additionally, ad hoc reporting requires specialized IT skills creating delays and bottlenecks in accessing essential insights. These challenges underscore the pressing need for streamlined, data-driven solutions to enhance client care.

The solution: The myneva.analytics app

myneva.analytics is a cloud-based analytics service that provides care organizations with valuable insights into their care business. It enables care organizations to make data-driven decisions using segment-specific metrics and KPIs thereby enhancing productivity and increasing satisfaction.

Key benefits

Faster data-driven decision making

Enables quick and easy data driven decision making directly through interactive dashboards and charts.

Offers deep insights on trends

Robust support for time-series analysis. Enables users to create visualizations that track metrics over time. This allows users to identify the trends and patterns in historical data.

Self-service data visualization and exploration

Easily combines multiple charts, tables and filters into a single dashboard providing a comprehensive view of the data.

How does myneva.analytics help your organization?

Supporting daily care and achieving organizational goals

Interactive dashboards combine charts, tables, and filters into a single view, providing caregivers a comprehensive overview of the client data to support daily care and the achievement of client goals.

Faster data exploration

Quickly explore and analyze data to make informed decisions, adapt to reporting changes and enhance operational efficiency, ultimately improving care quality.

Simple implementation with standardized reports

Seamlessly integrates into your existing processes and immediately makes the day-to-day work of your care staff easier by leveraging standardized and preconfigured reports.

Easing regulatory reporting requirements

Meets regulatory standards with data access logging and optimizes performance by pre-aggregating data and providing standardized reports for managers.

Key features

- Explore datasets
- Create visualizations
- Filter dataset categories
- Combine multiple charts and tables
- Time series visualizations
- Explore and add various reports and charts
- Trend analysis
